

Air Pollution Paragraph 100 Words

Air pollution, a concerning issue globally, occurs when harmful substances alter the natural composition of the air we breathe. Sources like vehicles, industries, and even household activities contribute to this problem. Pollutants such as particulate matter and carbon monoxide pose significant health risks, leading to respiratory diseases. Shockingly, nearly all global populations are exposed to unsafe levels of air pollution. Moreover, this issue is interconnected with climate change, as many air pollutants also contribute to greenhouse gas emissions. Implementing effective policies to reduce air pollution not only safeguards public health but also aids in mitigating climate change, ensuring a healthier and sustainable future for all.
