

Essay on Horse for Class 1

Horses are fascinating animals that have lived with humans for thousands of years. They are big, beautiful animals with four strong legs that help them run fast. Horses can be many different colors, like brown, black, white, and even spotted!

A horse has a long tail that it swings to shoo away flies, and it has a mane, which is long hair on its neck. Horses have big eyes and long ears that move to catch sounds from all directions. They use their ears, eyes, and even noses to understand the world around them and to communicate with other horses and people.

Horses are very friendly and can form a special bond with humans. They love to eat grass, hay, and sometimes special treats like apples or carrots. Horses live in a place called a stable, and when they're not in their stable, they enjoy running and playing in wide, open spaces.
