

Paragraph On Television In 100 Words

Television has undergone significant evolution since its inception. In 1928, John Logie Baird demonstrated the world's first color transmission using scanning discs and light sources. Later, in 1940, he introduced a practical hybrid system combining black-and-white display with a rotating colored disk. Meanwhile, Peter Carl Goldmark pioneered an electro-mechanical system at CBS in 1939. Despite technical challenges, color broadcasting began in 1954, with widespread adoption occurring in the mid-1960s. The transition to digital television in the late 2000s brought about smart TV sets, integrating Internet and web features. Today, smart TVs offer a wide array of functions beyond traditional broadcasting, revolutionizing home entertainment.
